

Comestero Sistemi

Product: fans with capacitive motor.

Application: ironing boards and irons.

Description: Comestero Sistemi has consolidated its range of fans with capacitive motor, proving to be one of the leader companies in the development of products for

the household appliance sector. The capacitive motor guarantees unrivalled efficiency if compared with the standard "shaded pole", efficiency that obviously means energy saving, matter that consumers have more and more at heart. Besides, it is possible to invert the motor rotation using a common switch. This function is widely spread especially in the sector of sucking/blowing ironing boards. The fan sizes range from a minimum of 120 mm to a maximum of 220 mm while thickness goes from 38 mm to 60 mm. The design of the new grid line completes the fan, making it discrete and safe.
